

Chapter 19.70 AOZ AIRPORT OVERLAY ZONE

19.70.140 Horizontal zone--Established.

A. Horizontal zones are hereby established as that area the perimeter of which is constructed by swinging arcs of specified radii from a point on the centerline and two hundred feet beyond each end of each runway, and connecting the adjacent arcs by lines tangent to those arcs.

B. The radius of each arc is five thousand feet for all runways designated as utility or visual, and ten thousand feet for all other runways. The radius of the arc specified for each end of a runway will have the same arithmetical value. That value will be the highest determined for either end of the runway. When a five-thousand-foot arc is encompassed by tangents connecting two adjacent ten-thousand-foot arcs, the five-thousand-foot arc shall be disregarded in determining the horizontal zone.

C. The horizontal zone does not include the approach and transitional zones. (§ 1 (part) of Ord. passed 8/22/84: prior code § 22-30A-8)
